1. What is the output of the following program?

```
#include
int main(void)
{
    int i;
    i = 1;
    while (i <= 128)
    { printf("%d ", i);
      i *= 2;
    }
    return 0;
}
```

Save your code as as1.c

The output from the program above are the set of numbers from 1 to 128 wherein the first number is multiplied by 2, to be specific the program will result in a geometric sequence of 2 starting from number 1 and ends with a number equal or less than 128.

```
main.c
1  #include <stdio.h>
2  int main(void)
3  {
4      int i;
5      i = 1;
6      while (i <= 128) {
7          printf("%d ", i);
8          i *= 2;
9      }
10     return 0;
11 }
12
```

Output

```
/tmp/pzicfuqISl.o
1 2 4 8 16 32 64 128
```

2. Which one of the following statements is not equivalent to the other two (assuming that the loop bodies are the same)?

3. a) while (i < 10) {...}
4. b) for (; i < 10;) {...}
5. c) do {...} while (i < 10);

Save your code as as2.c

They are more or less the same, based on the code that I have created they function the same and the output is also the same

main.c

Run

Output

Clear

```
1 // Online C compiler to run C program online
2 #include <stdio.h>
3
4 int main() {
5     int i;
6     i=1;
7     printf("while loop");
8     while (i < 10){
9         printf("{...}");
10        i=i+1;
11    }
12    printf("forloop");
13    i=1;
14    for (; i < 10;){
15        {
16            printf("{...}");
17            i=i+1;
18        }
19        printf("do while loop");
20        i=1;
21        do
22        {
```

```
/tmp/pzicfuqIS1.o
while loop{...}{...}{...}{...}{...}{...}{...}{...}{...}{...}forloop{...}{...}{...}{...}{...}{...}{...}{...}{...}{...}do while loop{...}{...}{...}{...}{...}{...}{...}{...}{...}{...}
```

3. Convert item 1 into an equivalent for statement. You can validate your answer by checking if the produced outputs by both the while and for statements are similar.

For loop and while loop are fundamentally the same thus the only thing i changed is the loop statement; thus the while loop have been changed to for loop.

main.c

Run

```
1  #include <stdio.h>
2  int main(void)
3  {
4      int i;
5      i = 1;
6      for (; i <= 128; ) {
7          printf("%d ", i);
8          i *= 2;
9      }
10     return 0;
11 }
12
```

Output

/tmp/M8qXisfM6y.o
1 2 4 8 16 32 64 128

4. 4. Write a code that computes for the power of two: Save your code as as4.c

main.c	Output
<pre> 1 #include <stdio.h> 2~ int main() { 3 int choice, power; //variable used to store the inputted value and the output 4 power=1; 5 printf("Enter the power "); 6 scanf("%d", &choice); //user prompt for the input 7 8~ while (choice > 0) { // while statement so that if the power inputted is greater than 0 then the program will keep multiplying the answer by 2 until it reaches 0 9 power = power*2; 10 choice=choice-1; // everytime the loop was run 1 is subtracted to the input until it becomes 0 11 } 12 printf("Answer = %d", power); 13 return 0; 14 }</pre>	<pre> /tmp/GfoEAvYwWu.o Enter the power 10 Answer = 1024</pre>

5. Write a program that displays a one-month calendar.

main.c	Output
<pre> 1 #include<stdio.h> 2~ int main(){ 3 int days, startingday; 4 int firstday; 5 printf("enter no of days in a month:\n"); 6 scanf("%d",&days); // scans the number of days in a month 7~ if (days <28 days> 31) { // if statement to determine if the inputted value is correct, if the inputted value is less than the least number of days and most number of days in a month then it is invalid 8 printf("invalid number"); 9 } 10~ else{ 11 printf("enter first day in a month:\n"); 12 scanf("%d",&firstday); 13~ if (firstday <1) { // if firstday is negative then it is an invalid number 14 printf("invalid number"); 15 } 16~ else{ 17 for(startingday=1;startingday<firstday;startingday++) // algorithm for the calendar</pre>	<pre> /tmp/509rjE6she.o enter no of days in a month: 31 enter first day in a month: 1 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31</pre>
